

# ITCT HW1

---

A C-based jpeg baseline encoder & decoder, and is also NTU course 資訊理論與編碼技巧 HW1.

You can check more detail on my [github repo](#)

## Prerequisites

- use [bitmap library](#) to access bmp file.
  - this library is written in c++, so we should compile whole project using **g++**

## How to use

### Compile

- use **makefile** to compile all

```
$ make
```

- and you can specific decoder or encoder, even clean (delete)

```
$ make encoder # g++ -o encoder encoder.c -O3
$ make decoder # g++ -o decoder decoder.c -O3
$ make clean # rm decoder encoder
```

- or compile with **g++**

```
$ g++ -o decoder decoder.c -O3
$ g++ -o encoder encoder.c -O3
```

### command example

- encoder: NOTICE that **input file** should be bmp, **output file** should be jpg
  - **output file** is optional, if you don't specify it, it would be **image.jpg**

```
$ ./encoder <input file> [output file]
```

- decoder: NOTICE that **input file** should be jpg, **output file** should be bmp
  - **output file** is optional, if you don't specify it, it would be **image.bmp**

```
$ ./decoder <input file> [output file]
```

- NOTICE that \$ stands for command prompt.

## environments

- already tested on my macOS and NTU CSIE server (Arch Linux), so any FreeBSD or Linux environments should be fine.
- more detail below:

```
$ g++ -v
Configured with: --prefix=/Applications/Xcode.app/Contents/Developer/usr --
